Intelivote Systems' Support Agent module provides a full set of features designed to support voters who have questions regarding the election or event. Full voter lookup by address, name, or PIN allows the support agent to assist the voter with everything from PIN status to the status of activity completed by the PIN holder. It is important to note that it is impossible for the agent to see how a particular voter has cast their ballot. The range of features and functions available to the agents to assist voters prior to, during and after an election ensure that participants using the Intelivote System have a comprehensive set of answers to all their election questions.

The support agent centre can be setup wherever the client wants it to be hosted. Typically it is setup in the region where the election is to be conducted with local call centres contracted to perform the work. Training on the use of the agent module is accomplished in a single day.

Intelivote Systems' Candidate Module is one of the most attractive features of the system for candidates of all levels. This tracking feature allows candidates to identify voters (who have committed to supporting a particular individual), the ability to track their participation in the election. This is similar to manual processes currently performed by agents or scrutineers who position themselves at polling stations and cross off names from the voters list as voters participate.

Using the Intelivote System, candidates and their campaign staff can place supporters on "My List" of identified voters and once the election starts, a check mark appears next to the number of the registered voter signifying they have cast their ballot. An "M" appears if the voter has actually attended a regular polling station and "Manually" voted.

It is important to note that it is **not possible** to see "who" the voter has cast their ballot for, only that they have participated in the election.

Anytown Municipality

New Voter

Intelivote's Enumeration Module is perfectly suited for those municipalities or organizations that need to add or change information on eligible voters prior to an event or election.

This module adds eligible voters to the official electors list and assigns them the necessary category ensuring they are properly enumerated and categorized prior to the election.

The category assignment, which sets up the voter's slate of candidates they will vote on, is guaranteed to be correct as the system assigns the voter this information based on valid address information.

This module would typically be used by existing returning officers or clerks who are responsible for maintaining the official list of electors.

Intelivote Systems can import your existing list of electors into the system ensuring that current information maintained by the municipality or organization is used as a starting point in the valid electors list.
