

# A VOTE FOR WHAT'S NEXT

Conduct your Municipal Elections using electronic voting. Intelivote takes elections to the next level.

With Intelivote, you get a seamless solution of traditional polling stations and electronic voting options – with the high level of security and auditable results you expect for your election event.

Intelivote's complete election system benefits everyone involved in the process:

- ✓ Voters enjoy a range of convenient voting options, including telephone, wireless and Internet voting, which can increase participation rates
- ✓ Elections officials and administrators can control activities and audit results, reducing human resource requirements
- ✓ Candidates can access up-to-the-minute information on voting progress to help them manage their campaign

Our uniquely flexible solution lets you maintain your current process while adding convenient electronic options – you can gradually add as many alternatives as you like, without disrupting your traditional system.

Intelivote provides a complete election solution. There is no software or hardware to buy, and no complicated technology integration. Intelivote's experienced electoral and technical team provides the support and expertise you need throughout your entire voting event - ensuring precise, timely and auditable results.

# A VOTE FOR CONVENIENCE

Running an election is a challenging task. You need to manage elector lists, find reliable staff, recruit volunteers, count and verify results, keep candidates and media informed of progress and make it easy for voters to participate.

Intelivote supports all of these activities with the most comprehensive and convenient election service available.

The Intelivote system makes it easy for voters to have their say.

With our multi-channel voting access, they can choose the voting method that is best for them; phone, cell phone, the web or traditional polling station. Once a registered voter receives their unique PIN, they can decide up to the last minute which option to use.

For election officials, the wide range of voting options can reduce requirements for traditional polling station staff and volunteers. As well, Intelivote provides comprehensive list management - you can maintain and audit voter registration lists as required.

Intelivote's added value lies in the fact that it does all of this without straining your resources. Our team is comprised of seasoned professionals in the election process, as well as technology specialists who integrate the traditional and electronic voting methods.

# A VOTE FOR RELIABILITY

---

Intelivote brings proven technology and industry expertise for a reliable voting event.

With features such as high-availability, clustering, redundancy, fault-tolerance and enhanced network security, Intelivote provides industry-leading performance throughout the entire election process.

With Intelivote, your authorized election officials have access to real-time election, system and network information before, during and after the event.

Through comprehensive list management, Intelivote provides accurate and verifiable voter registration, and tracking of this activity during the event, as well as convenient ways to register voters not included in existing lists.

Intelivote's solution also provides timely updates to candidates and media on the progress of the event. At any stage of the election, you'll have access to up-to-the-minute information on voter participation and turnout that can help candidates make informed election day decisions.

Intelivote backs all of this with our experienced support staff to ensure the entire election process runs smoothly and efficiently.

# A VOTE FOR SECURITY

---

Along with increased participation and streamlined activities, the Intelivote solution was built with your greatest security issues in mind.

Our technology is powered by Cisco and Oracle, the world leaders in digital security and large-scale transaction processing.

Other comprehensive security features provide a 'one voter, one vote' mechanism, assigning an individual PIN number to each voter, which restricts a single vote to each registered PIN.

Intelivote is fully auditable, and can provide detailed reporting during and after an event.

It also provides an anonymous voting environment; only the voter knows how they voted – maintaining the secrecy of ballot, one of the most important security elements in voting.

These, and other security features, provide assurance that your voting event can be measured, controlled and audited according to your unique electoral procedures.
